NEW SOUTH WALES

SUMMARY OF VITAL STATISTICS, 1963

This bulletin contains a summary of vital statistics for New South Wales for the year ended 31st December, 1963. Detailed statistics for earlier years are published in the Official Year Book and in the Part "Population and Vital Statistics" of the Statistical Register of New South Wales.

Population of New South Wales. For periods between census enumerations, the population of the State is estimated by adding the subsequent natural increase (the excess of births over deaths) and recorded net migration (the excess of arrivals over departures) to the population ascertained at the previous census. Accurate data as to natural increase are ensured by the compulsory registration of births and deaths. A system of recording arrivals and departures is maintained but complete records of interstate movements are not available and the recorded net migration is therefore approximate.

The intercensal estimates are subject to revision when the population is ascertained at the next census, and any discrepancy disclosed by the census is added to the recorded net migration. In this bulletin, population estimates for the years 1959 to 1960 have been revised in the light of the final results of the 1961 census.

Vital Statistics Rates. Rates per 1,000 of mean population for the years 1959 to 1961, as shown in this bulletin, have been calculated on estimates of population revised in accordance with the final results of the 1961 census.

Births and Deaths in Statistical Divisions of N.S.W. Births registered in New South Wales are allocated to a subdivision of the State according to the usual residence of the mother, and deaths registered are allocated according to the usual residence of the deceased. In cases where the usual residence is outside the State, the birth or death is allocated to the sub-division in which it occurred.

Still-births. For purposes of record, still-births are registered as deaths as well as births, but in this bulletin, still-births are not included in the statistics of deaths. A still-born child is defined as "any child of seven months gestation or over, not born alive, and includes any child not born alive which measures at least fourteen inches, but does not include any child which has actually breathed".

Infant deaths. The term "infant deaths" relates to the deaths of infants under one year of age.

Classification of Causes of Death. Deaths have been classified in this bulletin according to the Seventh Revision (1955) of the International Statistical Classification of Diseases, Injuries and Causes of Death.
